Dentils

Dentils (also known as corbels or modillions) offer a decorative element ideally suited to more exclusive homes and apartments. The TF Dentil series meets New Build needs with a secret fix installation footplate. Simply select a suitable design and mechanically fix through the soffit. The range is designed to complement the PVCu fascia and soffit systems in use today. Whatever your need, there's a design to match any eaves overhang.

Typical Dentil Installation

- Realistic
- Cost effective
- Value adding
- Lightweight
- Quick and easy to install
- Strong and weatherproof
- Limitless variations

Banbury cornice introduces subtle curves to an eaves detail. Lightweight and low maintenance polyurethane mouldings are a cost effective way to soften plain elevations.

Dormer detailing can prove particularly effective with our smaller designs, whilst C.840 and C.820 cornice offer a bolder statement to traditional eaves.

Smaller designs can be mitre cut to suit any corner configuration, whilst the C.820 cornice comes with a choice of pre-manufactured 90, 135 degree internal and external corners.

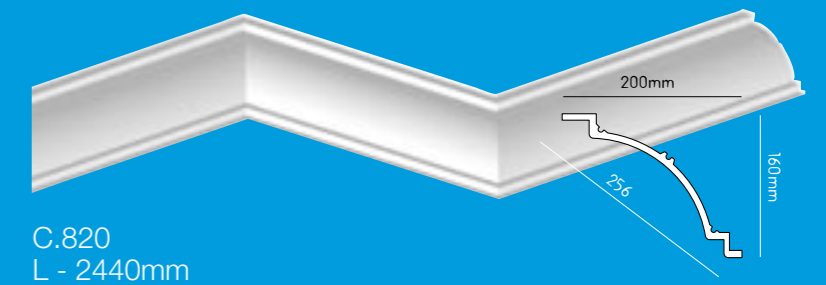

Exterior Cornice

Cornice With Pre-manufactured Corners

At Banbury we offer a full range of innovative GRP products for every application, from finials to chimneys, even pre-assembled dormers! For our full range of products check our website at www.banbury-grp.co.uk

Finial

Our sturdy FI.01 finial is designed to sit on the ridge above gable ends. It is fashioned from lightweight polyurethane and is not prone to site damage in the same way as terracotta alternatives. The base design has been formed to allow installation on pitches of 30-60°.

FI.01
H - 430mm
Wmax - 230mm

Exterior Corbels & Brackets

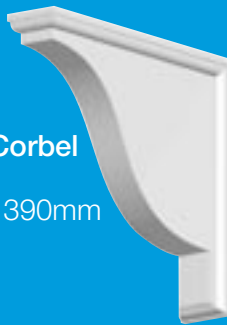

Gallows Brackets and large Feature Corbels are offered as a stylish yet durable detail, to feature under canopies, bay and oriel windows.

Manufactured from a tough Duropolymer, these products can offer the effect of a finely crafted timber product, but without the maintenance concerns.

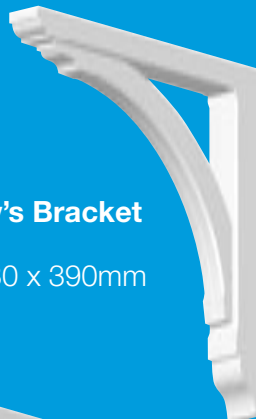

FC.01 has sharply defined, sweeping curves which are most effective when installed below a flat top canopy or used in pairs beneath oriel windows.

GB.03 and GB.04 both offer structural rigidity without parallel, compared with other low cost maintenance options. A woodgrain effect mimics the traditional appearance and compliments both GRP and traditionally constructed duo pitch canopies.
