- Replicates any material
- Quick and easy to install
- No delay to finishing trades
- Low maintenance
- Saves time and money
- Suitable for any location

forward thinking

Banbury Innovations are constantly developing new products and solutions for the construction industry. Retrofit heads, arches and cills together with complete window surrounds and lightweight copings provide fast-track solutions to the challenges facing today's developers.

Our unique brick cladding challenges architects and designers to adopt a more modular approach to the future of building. This product will be integrated into a range of garages being launched together with a distinctive range of garage doors, combining the best of both traditional and contemporary designs.

For more information telephone 0845 688 8835 or e-mail sales@banburyinnovations.co.uk

A solutions-driven group that designs, manufactures and distributes a wide range of fast-track building products for the construction industry.

Long established manufacturer and supplier of quality artstone including traditional cast products. The range includes porticos, window heads and cills, string courses, balustrades, quoins, copings and much more.

Premium supplier of facing bricks in continental, metric and imperial sizes. The company also supplies architectural masonry, brick slips, terracotta rain screen products, glazed bricks and roof tiles.

UK distributor of fast track commercial construction systems including large format Silka blocks, Verhelst floors and staircases, Unilin roof panels and Alltek thin bed sprayed plaster.

Design, manufacture and supply of bespoke large-scale glazed structures. From a large span conservatory, restaurant or pool enclosure to an impressive glazed entrance, an MPS Portal Structure is the perfect solution.

great GRP incredible innovation

your perfect solution

The GRP range from Banbury Innovations is extraordinarily versatile, exceptionally durable and astonishingly realistic.

It can be used in an almost endless number of ways to enhance existing structures, replace traditional materials or complement master craftsmanship. In fact, GRP is often more hard wearing than the real thing – it's been used on London's Tower Bridge for over 30 years with little sign of wear and tear, despite the pollution, damp, salt and stresses of life at the heart of Britain's capital.

Combining light weight with inherent strength, GRP provides a weather resistant finish whilst offering a variety of surface textures and unlimited colour

ranges. Our innovation, experience and attention to detail combine to give us a unique standard of product quality. We can replicate brick, plaster, bronze, gold, slate, tile, wood or lead to a level that is almost impossible to distinguish from the real thing.

GRP is fast becoming the preferred choice of many developers for chimneys, dormer windows, canopies and door surrounds offering a lightweight, cost effective option designed to meet the modern day requirements of off-site fabrication. Apart from standard ranges, we can manufacture almost anything, from brick cladding panels to gargoyles. Choose from an existing range or create a bespoke design to your own exact specifications.

- No delay to finishing trades
- Low maintenance

decorative features

In recent years there's been a general move away from plain facades as homeowners and developers alike seek to differentiate properties by recreating the classical styles of a bygone age. At Banbury Innovations our exterior range embodies both classical and contemporary styles including corbels, dentils, finials and cornice mouldings. All products are manufactured from premium quality materials for long life and optimum performance.

canopies

We offer an extensive range of window and door canopies. Simply decorative or functional canopies offering weather protection, our GRP solutions can be tailored and designed to suit both period and more contemporary settings.

& surrounds

roof features

Litestack chimneys

Litestack is a cost effective, premium quality product providing the appearance of a traditional chimney stack; available as a purely cosmetic chimney or a working chimney suitable for Class II gas appliances.

As a lightweight ready to install chimney stack, Litestack is very easy to use - being simply lifted into position, bolted onto the roof trusses and then leaded in the normal way. Each chimney can be tailored as much or as little as required to meet your needs - we can match the pitch, the texture, the colour, the pots and the capping to suit your build.

The most popular Litestack chimneys are those based on our four standard designs - Kent, Norfolk, Warwick and Staffordshire.

Dovecotes

An attractive decorative feature, dovecotes make an excellent, virtually maintenance free addition to any project.

Dormers

Dormers save time, money and effort. A one piece GRP dormer from Banbury Innovations offers ease of installation, low maintenance and no delay to finishing trades. Pre-insulated, a range of finishes are available including lead, brick, stone and render.

Whatever product you choose, GRP will be easier to work with in almost every way than traditional materials - being lighter, made to more accurate dimensions and easier to install. GRP offers realism and creates a strong visual statement whilst aiding construction time and expense.
